

Given two cells on the standard chess board, determine whether they have the same color or not.

## Example

- For `cell11 = "A1"` and `cell12 = "C3"`, the output should be `chessBoardCellColor(cell11, cell12) = true`.

- For `cell11 = "A1"` and `cell12 = "H3"`, the output should be `chessBoardCellColor(cell11, cell12) = false`.

## Input/Output

- [execution time limit] 0.5 seconds (cpp)
- [input] string cell1
- [input] string cell2
- [output] boolean
